

## PEST MANAGEMENT

Integrated Pest Management (IPM) is a systematic approach to managing pests focusing on long-term prevention or suppression with minimal impact on the environment and non-target organisms. Our strategies for managing pest populations, should they develop, will be based upon the pest species and whether that species poses a threat to our students, staff, property or the environment. We currently utilize Buffalo Exterminating Company to provide inspections, monitoring and recommendations to assist us in our response actions.

At this time we do not anticipate the application of any pesticides in our District. If a situation should occur, we will provide 48 hour prior notification to all individuals requesting this information before an application is made.

If you desire, we will place your name on a list of individuals who wish to receive 48 hour prior notification of a pesticide application. Please contact the Buildings and Grounds Office to have your name placed on this list. The list will be valid for the current academic school year. Only one (1) submission is required annually for the period July - June.
